

POOJAN MANOJKUMAR PATEL

Sydney, NSW | +61 422 000 830 | patelpoojan6225@gmail.com
linkedin.com/in/poojanmpatel | poojanmanojkumarpatel.github.io/My_Portfolio | github.com/poojanmanojkumarpatel
Junior Data Analyst | Python · SQL · Pandas · Scikit-learn · R | Deloitte AU Simulation | Full AU Work Rights

PROFESSIONAL SUMMARY

IT graduate with applied data experience across ML modelling, analytics dashboards, and production data pipelines. Built CricketOracle, a supervised ML pipeline predicting match outcomes at 60-70% accuracy using Scikit-learn and Pandas. Designed the Selective Prep analytics layer (PostgreSQL, Recharts) tracking student performance across 6 criteria. Backend engineer at EasyCM, architecting the Supabase PostgreSQL data layer with row-level security and structured LLM output schemas. Completed end-to-end data analysis projects in Python/Pandas and R covering EDA, data cleaning, statistical analysis, and visualisation. Previously optimised database queries and reduced API response time by 22% at Robotics Marketer (MongoDB, 4,000+ users). Completed the Deloitte Australia Data Analytics Job Simulation. Full Australian work rights — Subclass 485, no sponsorship required.

SKILLS

Data & Analytics: Pandas · Scikit-learn · EDA · Feature Engineering · Supervised ML · Data Wrangling · Data Modelling · Jupyter · R

SQL & Databases: PostgreSQL · Supabase (RLS) · MySQL · MongoDB · Redis · Firebase · Query Optimisation

Visualisation: Recharts · Matplotlib · Jupyter Notebooks · Analytics Dashboards

Programming: Python · SQL · R · Go · TypeScript · JavaScript · Java · PHP

Backend & APIs: Django · Go (Fiber, Chi) · REST APIs · Webhooks · API Performance Optimisation

Cloud & DevOps: GitHub Actions · CI/CD · Railway · Vercel · Supabase

EXPERIENCE

Backend Engineer (Data & APIs) - EasyCM

April 2026 - Present

Sydney, NSW (Remote) · Multi-tenant WhatsApp CRM SaaS · easycm.com.au

- Designed the Supabase PostgreSQL data layer with row-level security for multi-tenant isolation — custom field system with colour-coded tags, lead/conversation/message schemas.
- Built structured LLM output pipelines: Claude API generates JSON against predefined schemas for conversation summaries, notes, and duplicate detection — validated and stored in normalised tables.
- Redis + Async background workers process inbound WhatsApp data asynchronously; auto-creates leads, conversations, and message records with zero manual input.

Software Developer Intern (Data + APIs) - Robotics Marketer

Jul 2025 - Nov 2025

Melbourne, VIC (Remote from Sydney) · Django/MongoDB · 4,000+ active users · Agile team of 7

- Reduced API response time by 22% through query profiling, MongoEngine pattern redesign, and targeted index creation on high-traffic MongoDB collections.
- Optimised NoSQL data models — rationalised collection schemas, removed redundant lookups, and reduced average payload size for reporting endpoints.
- Designed RESTful API endpoints in Django + Python — schema, validation, and data integration across the prospect-to-customer lifecycle.

Operations Associate (Casual) - Chemist Warehouse

Apr 2023 - Present

Sydney, NSW · Concurrent with full-time BIT degree

- 3+ years AU retail/warehouse operations — fulfilled 3,000+* shipments across stocktake, inbound, and outbound flows.
- Trained 4 new starters* on workflows, safety procedures, and store systems.

IELTS Tutor - Taral Sir's IELTS

Aug 2022 - Sep 2022

Ahmedabad, India

- Marked 250+ test papers per week against IELTS band-descriptor rubrics — structured scoring and statistical feedback tracking across student cohorts.

FEATURED PROJECTS

IMMI_CRM - Multi-Tenant Migration & Education Agency CRM - Python (FastAPI) · React/TS · Supabase PostgreSQL (RLS) · Stripe · DocuSeal · Claude API · AWS S3 · Redis/arq

- Built a 13-role RBAC CRM backend from scratch across 30+ FastAPI modules using a five-layer access model (tenant isolation, scope binding, assignment, role capability, field-level encryption) — real Stripe payment links, DocuSeal e-signature routing, and AWS S3 document storage, not mocked integrations.
- Designed an async Claude Haiku pipeline for AI-generated case summaries with cost controls (content-hash dedup, per-account rate limiting) and a Redis/arq background job engine driving scheduled reminders and notifications.
- Verified Postgres row-level security cross-tenant isolation via live integration tests against production Supabase; provisioned 4 real multi-tenant demo orgs (50+ seeded accounts, 150+ business records) behind a platform-level admin view engineered to guarantee zero client-PII leakage across tenants.

CricketOracle - ML Match Outcome Prediction - Python · Scikit-learn · Pandas · Jupyter | github.com/PoojanManojkumarPatel

- Supervised ML pipeline predicting cricket match outcomes at 60-70% accuracy. Feature engineering: team form windows, head-to-head history ratios, venue-specific performance metrics.
- Full ML lifecycle: data wrangling (cleaning, encoding, imputation), exploratory data analysis, feature selection via correlation and importance ranking, model training (multiple classifiers), hyperparameter tuning, and evaluation against a held-out test set.

E-Commerce Dataset Analysis - Data Cleaning & EDA - Python · Pandas · Matplotlib · Jupyter Notebook

- End-to-end analysis of a combined e-commerce dataset: removed records with missing gender/rating/helpfulness and null reviews, computed descriptive statistics (unique users, items, categories), and analysed rating distributions across demographics.
- Explored correlations between gender, helpfulness, and category against ratings using boxplots and grouped aggregations. Implemented multi-rule outlier detection (helpfulness ≤ 2 , users with < 7 ratings, items with < 11 ratings) applied sequentially.

Selective Prep - Analytics & AI Marking Platform - React · TS · Go (Chi) · Supabase PostgreSQL · Claude Haiku API · Recharts | selective-preparation.vercel.app

- Recharts analytics dashboards visualise student performance across 6 NSW Selective criteria with per-criterion trend tracking over 9 practice tests.
- PostgreSQL schema designed to support multi-dimensional score breakdowns and time-series analysis of student progress.

Deloitte Australia Data Analytics Job Simulation - Forage (Mar 2026)

- Completed a structured analytics simulation covering data preparation, exploratory analysis, insight generation, and stakeholder communication.

Distributed Systems Analysis - Uber Case Study - Research · Systems Design · Lamport Clocks · Resource Scheduling

- Analysed distributed system architectures including Uber's real-time dispatch system, Lamport logical clocks for event ordering, and Mesos fine-grained resource sharing — evaluated trade-offs in consistency, availability, and fault tolerance.

EasyCM - Data Pipeline & Schema Design - Go · Supabase PostgreSQL (RLS) · Redis · Anthropic Claude API | easycm.com.au

- Multi-tenant data architecture with row-level security, structured AI output validation, and async data processing pipeline. See Experience for full details.

EDUCATION

Bachelor of Information Technology

Feb 2023 – Dec 2025

Macquarie University · Sydney, Australia

Major: Software Technology | Minor: Data Science | WAM: 70 (Credit)

Relevant coursework: Algorithms, Distributed Systems, Databases, Data Science, Mobile Development, Operating Systems, Computer Graphics, Big Data, Cybersecurity.

CERTIFICATIONS

Deloitte Australia Data Analytics Job Simulation — Forage (Mar 2026)
